

WiikHall Color Scheme

O.B. Wiik recommends you to choose a color that helps your WiikHall blend within its existing environment. You can start by examining the area where the WiikHall will be built to match the surrounding colors of other buildings.

If the WiikHall is placed in an industrial area where the cover is exposed to gas exhaust and dirt, O.B. Wiik encourages you to consider darker colors. Darker colors tend to camouflage dirt better and can therefore be the best wall color to use under these conditions. When you invest in a WiikHall there are 9 standard colors to choose from. If you feel uncertain about what color to select you can always contact O.B.Wiik and we will try to come up with a suitable solution.

Some considerations to keep in mind:

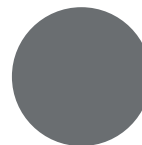

- Our perception of color changes depending on the size of the object, its distance and lighting.
- A white or light-gray roof cover provides the best natural light inside the WiikHall.
- Don't be afraid to select a more grayish color scheme, often times it can provide a more neutral and less loud presence compared to the brighter colors when painted on large wall.
- Yellow and red tones have higher color intensity than blue or green.
- Computer monitors have different color replication capability; the color you see on your screen can look different in reality. Therefore, O.B. Wiik encourages you to visit one of our offices to view our color schemes:

Yellow 325

Charcoal 980

Dark gray 961

Dark blue 660

Green 475

Gray 940/001

Beige 250

Red 116

White 001
